

Track Tac® PRW- Green
(Almost no odor at all)
Always clean tires using
Track Tac® Blue Tire Wash with DRT

Track Tac® PRW-Green will drop the hardness of the tire when cold, between 5 to 15 points, depending on the number of coats applied.

Average - 0-2 points if used as a conditioner - **do not wrap tires**

Average - 2 - 10 points if used as a pre race wipe - **do not wrap tires**

Specially designed to provide extra sticky tread on new tires, when there is normally no time to clean and prep the tires before going to the grid.

DIRECTIONS : For a Saturday Night Race

Saturday night as soon as the tires are mounted and available to treat => wipe on at least one coat before the race using some method that completely covers the tread of each tire. If time allows, more coats of **Track Tac® PRW-Green** gives a softer and more sticky tire.

Allow each coat to dry before applying the next coat - about 10 to 20 minutes. Wrapping the tires is **NOT** recommended

For softer tires increase the number of coats to 3 or 4 with **Track Tac® PRW-Green**. The procedure can be repeated on the same night for even softer tires.

Track Tac® PRW-Green will last longer, the longer it is allowed to penetrate the tire before racing.

Track Tac® PRW-Green can be put inside the tire, but nitrogen should be used to pressurize the tire.

If **Track Tac® PRW-Green** is used inside the tire extra care should be taken to insure that depressurizing the tire is done away from any spark or flame source and the depressurizing is done in an extremely well ventilated area.

Track Tac® PRW-Green works on natural or synthetic rubber.
Allow each coat to dry before applying the next coat - about 10 to 20 minutes.

Not for highway use
